RECOMMENDED USES

Commercial
Residential
Interior Floor
*Exterior Floor
Interior Wall
Exterior Cladding
Fireplaces
Shower Walls
**Shower Floors
Steam Showers
Pool & Spa

*24 x 48 R11 Anti-Slip Finish Only
**24 x 48 R11 Anti-Slip Finish and 2 x 2 Mosaic Mesh Only

DYNAMIC C.O.F. WET: ≥0.42

P.E.I RATING: 3

FROSTPROOF: Yes

DCOF rating is a measurement of a tile's frictional resistance. The above result is for the Standard Finish. The testing for R11 Anti-Slip Finish is static, which is different from the Dynamic Coefficient of Friction (DCOF) test which is a dynamic test. These two tests measure for different and separate results, therefore the DCOF test is not the appropriate test for the R11 Anti-Slip finish. To be certified as R11 Anti-Slip Finish, a tile must pass internationally-recognized testing.

The Anthea series is an Italian-made rectified through-body porcelain available in a stunning four color, two finish collection that includes the R11 Anti-Slip Finish. Created using digital print technology, Anthea is a calibrated fusion of numerous natural stone materials giving this product a gorgeous depth and color range. All of the colors in the Anthea series encapsulate new and original mineral forms, celebrating the charm and unpredictable beauty of nature. However, unlike other tile series, each color within this line features unique patterning and detail that are specific to each color.

Anthea features PROTECT® technology, which makes it easy to sanitize and eliminates up to 99.9% of bacteria. Besides being beautiful and remarkably resistant, PROTECT® surfaces have been crafted with Microban®, a proven antimicrobial product protection technology developed by the world leader in the sector. Integrated during the manufacturing stage, Microban® helps fight the growth of degrading bacteria on the surface of the tile for its expected lifetime. The result is a surface that stays cleaner and fresher in-between cleans. It is also inherently more durable and unalterable by climate conditions.

Piece to piece variation in shade or color are inherent in all fired clay products; therefore, it is recommended to mix tiles from several boxes at a time during installation to achieve the best range of color. When mixing sizes within a series, shade, texture and calibration differences should be expected. This series is suitable for residential and commercial applications. Because this material is a porcelain product, minimal maintenance is required.

For proper bonding, LFT/LHT mortar for large format and heavy tiles should be used when installing tiles with a dimensional length greater than 15 inches, and rectangular shape and plank tile, per industry standards. Proper thinset coverage is also necessary, and in some cases, back buttering of tile may be required.

For packaging information, please contact your local Arizona Tile.

DCOF rating is a measurement of a tile's frictional resistance. It is the specifier's responsibility to ensure the chosen tile is appropriate for each interior and exterior application.

Please view actual material when making your selection, as the images on this page are only representative.
