Reviewed on 05/19/2025

1 Identification**· Product identifier****· Trade name:** **PORCELAIN TILES manufactured by Atlas Concorde USA Inc.****· Other means of identification****· Application of the substance / the mixture / article**

Porcelain ceramic tiles for floors and walls.

Porcelain tiles are made from a blend of high-quality clays, silica sand, feldspar and other naturally occurring minerals, combined with water and fired at high temperatures in a kiln. The resulting tiles are odorless, stable, non-flammable, and do not present any immediate health risks.

Additionally, porcelain tiles are an environmentally friendly option compared to other flooring and wall covering materials, offering a more sustainable choice for construction projects.

This product is specifically designed for both construction and decorative applications, making it ideal for a variety of indoor and outdoor settings. Typical uses include floors, walls, kitchen and bathroom countertops, and similar installations

· Uses advised against

During installation, wet cutting or the score-and-snap method is strongly recommended. Improper installation techniques could expose installers to inhalation of harmful silica dust (SiO₂). Do not dry cut using power tools during the installation process. Using dry cutting methods could present a risk of acute lung injury. If adequate ventilation cannot be achieved, wear a mask or respirator.

· Details of the supplier of the safety data sheet**· Manufacturer/Supplier:**

Atlas Concorde USA Inc.

117 Seaboard Lane, Suite F170, Franklin (TN) - 37067 - USA

Reference number: +1 (615) 6617206

· Information department:

Atlas Concorde USA Inc.

E-mail: sds@atlasconcorde.it**· Emergency telephone number:** Atlas Concorde USA Inc.: +1 (615) 6617206*** 2 Hazard(s) identification****· Classification of the substance or mixture**

There is no proof or indication that the whole, finished product [definable as an "article" according to both 29 CFR 1910.1200 (Hazard Communication Standard)] has any risks according to Globally Harmonized System (GHS).

In the case of the breakage of the article or its processing, involving cutting, shaping, engraving or any other process which could lead to the release of dust traceable to the matrix of the article, it may generate crystalline silica powder (SiO₂) in the form of quartz.

The hazard assessment refers to this specific case. No acute or chronic effects are known from exposure to intact tiles.

Please see Section 3 for the crystalline silica content of the whole finished product.

Eye irritation 2A

H319 Causes serious eye irritation.

Carcinogenicity 1A

H350 May cause cancer.

Specific target organ toxicity (single exposure) 3

H335 May cause respiratory irritation.

Specific target organ toxicity (repeated exposure) 1

H372 Causes damage to organs through prolonged or repeated exposure.

· Additional information:

The breathable fraction of crystalline silica (SiO₂) may lead to lung damage or illnesses, such as silicosis.

· Label elements**· GHS label elements**Not applicable to intact tiles.

We recommend wet cutting or the score and snap method during the installation process. Improper installation techniques could expose installer to inhalation of harmful silica dust (SiO₂).

Rev. n. 3

Reviewed on 05/19/2025

Trade name: PORCELAIN TILES manufactured by Atlas Concorde USA Inc.

(Contd. of page 1)

Do not dry cut using power tools during the installation process. Using dry cutting methods could present a risk of acute lung injury. If adequate ventilation cannot be achieved, wear a mask or respirator.

· Hazard pictograms

GHS07 GHS08

· Signal word Danger

· Hazard-determining components of labeling:

Quartz (SiO₂)

Feldspar

· Hazard statements

Causes serious eye irritation.

May cause cancer.

May cause respiratory irritation.

Causes damage to organs through prolonged or repeated exposure.

· Other hazards

If the product is dry cut/sanded or altered in such a way that excessive and/or significant particulates and/or dusts may be generated, exposure may aggravate pre-existing eye, skin, or respiratory conditions. We recommend wet cutting or the score and snap method during the installation process. Do not dry cut using power tools during the installation process. Improper installation techniques could expose installer to harmful silica dust. Contains crystalline silica (quartz). When exposed to high temperatures, free quartz can change crystal structure to form tridymite (above 870°C.) or cristobalite (above 1470°C.) which have greater health hazards than quartz due to their more fibrogenic characteristics. Manufacturers who crush, grind or cut ceramic bodies fired to high temperatures should recognize the possible presence of tridymite and/or cristobalite.

Tiles and boxes, if not grasped or handled correctly, can accidentally fall causing crushing of both hands and feet.

· Results of PBT and vPvB assessment

· **PBT:** Not applicable.

· **vPvB:** Not applicable.

3 Composition/information on ingredients

· Chemical characterization: Mixtures

· Description:

Composition (%): The material is the result of high temperature sintering (between 1150 - 1250 °C) of various heavily compacted minerals in different proportions depending on the product.

Before sintering, the substances in the mixture are:

· Components:

CAS: 68476-25-5	Feldspar	30-50%
CAS: 1332-58-7	Kaolin	25-50%
CAS: 14808-60-7	Quartz (SiO ₂)	10-30%
CAS: 14807-96-6	Talc (Mg ₃ H ₂ (SiO ₃) ₄)	0-6%

(Contd. of page 2)

Additional information:

After firing, the finished product includes mainly silica/quartz (5-30%), glass (50-70%), mullite (0-15%), feldspar (0-15%), small amounts of inorganic additives, as well as inorganic pigments.

4 First-aid measures**Description of first aid measures****General information:**

First Aid Measures are applicable only to the dust resulting from crushing, grinding or sawing of tiles. Intact tiles pose no eye or inhalation hazards.

After inhalation:

Supply fresh air. If required, provide artificial respiration. Keep patient warm. Consult doctor if symptoms persist. In case of unconsciousness place patient stably in side position for transportation.

After skin contact: If skin irritation continues, consult a doctor.**After eye contact:** Rinse opened eye for several minutes under running water. If symptoms persist, consult a doctor.**After swallowing:**

Rinse out mouth with water.

Do not induce vomiting.

Most important symptoms and effects, both acute and delayed

No acute effects are known from exposure to intact tiles. Working with broken or cut tile produces a potential for cuts to the hands and exposed body parts. Acute effects such as eye irritation may occur if associated with high dust operations such as dry cutting or drilling the tile or during the removal of tile surfaces. In very rare cases, symptoms of acute silicosis, a form of silicosis (a nodular pulmonary fibrosis) associated with exposure to respirable crystalline silica, may develop following acute exposure to extremely dusty environments caused by generation of tile dust. Signs such as labored breathing and early fatigue may indicate silicosis; however, these same symptoms can arise from many other causes.

No chronic effects are known from exposure to intact tiles. Long-term, continual exposure to respirable crystalline silica at or above allowable occupational exposure limits may lead to the development of silicosis, a nodular pulmonary fibrosis (NPF). NPFs are also associated with pulmonary tuberculosis, bronchitis, emphysema, and other airway diseases. This type of chronic exposure to silica dust may also result in the development of autoimmune disorders, chronic renal disease, and other adverse health effects. Recent epidemiologic studies demonstrate that workers exposed to elevated silica concentrations have a significant risk of developing chronic silicosis. Signs such as labored breathing and early fatigue may indicate silicosis; however, these same symptoms can also arise from many other causes.

Indication of any immediate medical attention and special treatment needed

No further relevant information available.

5 Fire-fighting measures**Extinguishing media****Suitable extinguishing agents:**

Use fire fighting measures that suit the environment.

CO₂, extinguishing powder or water spray. Fight larger fires with water spray or alcohol resistant foam.

Special hazards arising from the substance or mixture No further relevant information available.**Advice for firefighters**

Protective equipment: No special measures required.

Additional information

Dispose of fire debris and contaminated fire fighting water in accordance with official regulations.

6 Accidental release measures

· **Personal precautions, protective equipment and emergency procedures** Avoid creating dust wherever possible.

· **Environmental precautions:**

Clean up and collect spilled material. Avoid breathing particulates.

If particulates are involved, evacuate the area of unprotected personnel during cleanup and wear an appropriate respirator.

· **Methods and material for containment and cleaning up:**

Use wet sweeping compound or water to minimize particulates.

Pick up mechanically.

· **Protective Action Criteria for Chemicals**

· **PAC-1:**

CAS: 14808-60-7 Quartz (SiO₂)

0.075 mg/m³

· **PAC-2:**

CAS: 14808-60-7 Quartz (SiO₂)

See Section 7 for information on safe handling.

See Section 8 for information on personal protection equipment.

See Section 13 for disposal information.

7 Handling and storage

· **Precautions for safe handling**

When cutting, grinding or removing, use equipment with integral dust collection and use local exhaust ventilation. Use wet cutting methods to reduce generation of dust.

Tiles and boxes, if not grasped or handled correctly, can accidentally fall causing crushing of both hands and feet.

· **Information about protection against explosions and fires:** The product is not flammable.

· **Conditions for safe storage, including any incompatibilities**

· **Storage:**

· **Requirements to be met by storerooms and receptacles:** Store in clean and dry conditions

· **Information about storage in one common storage facility:** Do not store together with acids.

· **Further information about storage conditions:** None.

· **Specific end use(s)** No further relevant information available.

8 Exposure controls/personal protection

· **Control parameters**

· **Components with limit values that require monitoring at the workplace:**

The following constituents are the only constituents of the product which have a PEL, TLV or other recommended exposure limit.

At this time, the remaining constituent has no known exposure limits.

· **Additional information:** The lists that were valid during the creation were used as basis.

· Exposure controls

· **Appropriate engineering controls** No further data; see section 7.

· **Personal protective equipment:**

· **General protective and hygienic measures:**

The usual precautionary measures for handling chemicals should be followed.

Avoid creating airborne dust while working

Do not eat or drink while working.

Wash hands before breaks and at the end of work.

Keep away from tobacco products.

Immediately remove all soiled and contaminated clothing.

Always provide effective general and, when necessary, local exhaust ventilation to draw dust away from workers to prevent routine inhalation.

Ventilation must be adequate to maintain the ambient workplace atmosphere below the permissible exposure limits.

Avoid contact with the eyes and skin.

· **Breathing equipment:**

In case of insufficient ventilation or risk of inhaling dust, it is necessary to use a face mask with a dust filter (at least FFP2).

· **Protection of hands:**

Cotton or leather work gloves should be worn when cutting this product to minimize skin exposure to dust and/or cuts.

10 Stability and reactivity

- **Reactivity** No further relevant information available.
- **Chemical stability**
 - **Thermal decomposition / conditions to be avoided:**
No decomposition if used and stored according to specifications.
- **Possibility of hazardous reactions** No dangerous reactions known.
- **Conditions to avoid** Protect from heat and direct sunlight.
- **Incompatible materials:** Keep away from: strong acids, strong bases and oxidation agents.
- **Hazardous decomposition products:** No dangerous decomposition products known.

*11 Toxicological information

- **Information on toxicological effects** Potential Health Effects: none for intact tile.
- **Acute toxicity:**

· LD/LC50 values that are relevant for classification:		
CAS: 14808-60-7 Quartz (SiO₂)		
Oral	LD50	>2,000 mg/kg (rat)
Dermal	LD50	>2,000 mg/kg (rabbit)

- **Primary irritant effect:**
Symptoms/Injuries After Inhalation: for particulates or dust from processing: irritation of the respiratory tract and the other mucous membranes. Cough, dyspnea (breathing difficulty), wheezing; decreased pulmonary function, progressive respiratory symptoms (silicosis). The lungs become very inflamed and may fill with fluid, causing severe shortness of breath and low blood oxygen levels.
- **on the skin:**
Symptoms/Injuries After Skin Contact: for particulates or dust from processing: exposure may cause skin irritation. Direct contact may cause irritation by mechanical abrasion.
- **on the eye:**
Symptoms/Injuries After Eye Contact: for particulates or dust from processing: may cause slight irritation to eyes. Contact may cause irritation due to mechanical abrasion.
- **Carcinogenicity**
Respirable Crystalline Silica (RCS)
Respirable crystalline silica is classified by the International Agency for Research on Cancer (IARC) as a Group I Carcinogen (carcinogenic to humans). The National Toxicology Program lists respirable crystalline silica as "Known to be a Human Carcinogen". USDOL/OSHA and NIOSH regulated crystalline silica as carcinogenic.

· **Additional toxicological information:**

Exposure to respirable crystalline quartz may cause delayed (chronic) lung injury - silicosis. Acute or rapidly developing silicosis may occur in a short period of time in heavy exposure. Silicosis is a form of disabling pulmonary fibrosis which can be progressive and may lead to death.

Some studies show that exposure to respirable crystalline silica (without silicosis) or that the disease silicosis may be associated with the increased incidence of several autoimmune disorders such as scleroderma (thickening of the skin), systemic lupus erythematosus, rheumatoid arthritis and diseases affecting the kidneys. Silicosis increases the risk of tuberculosis. Some studies show an increased incidence of chronic kidney disease and end-stage renal disease in workers exposed to respirable crystalline silica.

When used and handled according to specifications, the product does not have any harmful effects according to our experience and the information provided to us.
